

Name: UNTAL, Ray Emanuele P.

Laboratory 10: Comparative Resume Generation using Multiple LLMs

Section 1 - Prompt

Create a one-page professional resume using the following details:

Name: Ray Emanuele P. Untal

Email: runtal@addu.edu.ph

GitHub: <https://github.com/RayEmanueleUntal>

Education:

- Ateneo de Davao University (Undergraduate)
 - BS in Computer Science (Current)
 - President's Lister (Consistent since 1st Year, 2nd Sem)
 - Dean's Lister (1st Year, 1st Sem)
- DOST-SEI Scholar

Skills:

- **Languages:** Python, C++, Java, JavaScript, TypeScript
- **Web & Backend:** Next.js, NestJS, React Native, HTML/CSS, Eel, Drizzle ORM, REST APIs
- **Cloud & Database:** Clerk Auth, Neon (PostgreSQL), Vercel, PythonAnywhere, Git/GitHub
- **Core CS:** Data Structures and Algorithms (DSA), Problem-Solving, Analytical Thinking
- **Design:** UI Design (Infographics, PPTs, Digital Design and Illustrations), Attention to Detail

Projects & Experience:

- **Calorie & Protein Tracker:** Full-stack app that tracks user's daily calorie and protein intake. It uses the following tools: [Next.js](#), TS, Drizzle, Neon, Clerk Auth, and a custom API for Siri Voice Support (Shortcuts)
- **Palanca (Graduation) Website:** Deployed via GitHub Pages and PythonAnywhere; it uses JS/HTML/CSS with a Python backend for automated emailing. The website is used for sending messages to the graduates.
- **QR-Based Attendance Tracker:** Desktop application built with Python and Eel. It uses QR technology to read and track user attendance. It uses SQLite for its database. The project is used by the library of my high school.
- **AddU Merch Hub:** Centralized marketplace platform for university organizations built using Next.js.
- **Self-Regulated Learning App:** Mobile To-Do List (with other SRL Features) application developed using React Native.
- **LeetCode Proficiency:** Solved 400+ problems; ranked in the top 13.76% globally.

Format: Use a clean, modern, and minimalist layout with clear section headings. Keep it concise and suitable for internship or entry-level software engineering applications.

Section 2 - LLM Outputs

Output from LLM #1 (Gemini 3 Flash):

Ray Emanuele P. Untal

Davao City, Philippines | runtal@addu.edu.ph [GitHub: github.com/RayEmanueleUntal](https://github.com/RayEmanueleUntal)

EDUCATION

Ateneo de Davao University | *BS in Computer Science*

- **Academic Honors:** President's Lister (Consistent since 1st Year, 2nd Sem); Dean's Lister (1st Year, 1st Sem)
 - **Scholarships:** DOST-SEI Undergraduate Scholar
-

TECHNICAL SKILLS

- **Languages:** Python, C++, Java, JavaScript, TypeScript
 - **Web & Backend:** Next.js, NestJS, React Native, HTML/CSS, Eel, Drizzle ORM, REST APIs
 - **Cloud & Database:** Clerk Auth, Neon (PostgreSQL), SQLite, Vercel, PythonAnywhere, Git/GitHub
 - **Core CS:** Data Structures and Algorithms (DSA), Problem-Solving, UI Design (Infographics, Digital Illustration)
-

PROJECTS

Calorie & Protein Tracker | *Next.js, TypeScript, Drizzle, Neon, Clerk*

- Developed a full-stack application to monitor daily nutritional intake with a focus on seamless user experience.
- Integrated **Clerk Auth** for secure user management and a **custom API** to support Siri Voice Shortcuts for hands-free logging.

AddU Merch Hub | *Next.js, Tailwind CSS*

- Architected a centralized marketplace platform designed specifically for university organizations to manage and sell merchandise.
- Focused on creating a responsive, intuitive UI to streamline the pre-ordering process for students.

Palanca (Graduation) Website | *JavaScript, Python, PythonAnywhere*

- Built a digital platform for sending automated messages to graduates, deployed via GitHub Pages.
- Implemented a **Python backend** to handle automated emailing services reliably.

QR-Based Attendance Tracker | *Python, Eel, SQLite*

- Engineered a desktop application for a high school library to automate student check-ins using QR technology.
- Utilized **Eel** for the frontend-to-python bridge and **SQLite** for local, lightweight data persistence.

Self-Regulated Learning (SRL) App | *React Native*

- Designed and developed a mobile To-Do List application incorporating SRL features to help users improve productivity and habit tracking.

ACHIEVEMENTS

Competitive Programming

- **LeetCode Proficiency:** Successfully solved **400+ problems** focusing on complex algorithms and data structures.
- **Global Ranking:** Ranked in the **top 13.76%** of all users globally, demonstrating high-level analytical thinking and technical problem-solving skills.

Core Competencies

- **Analytical Thinking:** Strong foundation in optimizing code complexity and performance.
- **Attention to Detail:** Proven ability to blend aesthetic UI design with functional backend architecture.

Output from LLM #2 (GPT-5.3):

Ray Emanuele P. Untal

 runtal@addu.edu.ph |  github.com/RayEmanueleUntal

EDUCATION

Ateneo de Davao University — *BS Computer Science (Undergraduate)*

- **DOST-SEI Scholar**
 - **President's Lister** — Consistent since 1st Year, 2nd Semester
 - **Dean's Lister** — 1st Year, 1st Semester
-

TECHNICAL SKILLS

Programming Languages

Python • C++ • Java • JavaScript • TypeScript

Web & Backend Development

Next.js • NestJS • React Native • HTML/CSS • REST APIs • Eel • Drizzle ORM

Cloud & Databases

Clerk Authentication • Neon (PostgreSQL) • Vercel • PythonAnywhere • Git • GitHub

Computer Science Fundamentals

Data Structures & Algorithms • Problem Solving • Analytical Thinking

Design & Presentation

UI Design • Infographics • Digital Illustration • Presentation Design • Attention to Detail

PROJECTS & EXPERIENCE

Calorie & Protein Tracker — Full-Stack Web Application

- Built a nutrition tracking application monitoring daily calorie and protein intake

- Implemented full-stack architecture using **Next.js**, **TypeScript**, **Drizzle ORM**, **Neon PostgreSQL**, and **Clerk Auth**
- Developed a **custom API integration enabling Siri Voice Support** via Apple Shortcuts

Palanca Graduation Website

- Developed a web platform for sending personalized graduation messages
- Built using **HTML**, **CSS**, **JavaScript**, and **Python backend automation**
- Deployed through **GitHub Pages** and **PythonAnywhere** with automated email delivery system

QR-Based Attendance Tracker — Desktop Application

- Created QR-based attendance system using **Python** and **Eel**
- Implemented local database storage with **SQLite**
- Adopted by high school library for operational attendance monitoring

AdDU Merch Hub — Marketplace Platform

- Designed centralized merchandise platform for university organizations
- Built with **Next.js** focusing on usability and scalable structure

Self-Regulated Learning Mobile App

- Developed productivity and SRL-focused To-Do application using **React Native**
- Integrated task management and learning workflow features

PROBLEM SOLVING & COMPETITIVE PROGRAMMING

LeetCode Proficiency

- Solved **400+ algorithmic problems**
- Ranked in the **Top 13.76% globally**
- Strong foundation in algorithms, optimization, and logical reasoning

Section 3 - Comparison Table

Criteria	LLM #1 (Gemini 3 Fast)	LLM #2 (ChatGPT GPT-5.3)
Structure	Uses professional pipe () separators and a compact header including location.	Uses modern emojis (📁, 🖨️) and dashes (—) for a cleaner, modern look.
Clarity	Descriptions use strong technical verbs like "Architected" and "Engineered".	Uses bolding for key technologies (e.g., Next.js, SQLite) to improve skimmability.
Formatting	Consistently groups technologies with project titles for immediate context.	Uses distinct sub-bullet points for project details, which helps break up text .
Overall Quality	Excellent for detailed descriptions; feels more "narrative" and professional .	Best for quick visual scanning; highlights specific achievements like the library adoption.

Table 1. Comparison Table between Gemini 3 Fast and GPT-3.5

Section 4 - Reflection

In this activity, I compared two Large Language Models (LLMs), specifically Gemini 3 Flash (LLM A) and GPT-5.3 (LLM B), to generate a professional resume using a standardized prompt. Both models followed the structured instructions, but LLM A leaned toward a traditional, descriptive professional style, whereas LLM B utilized modern visual elements such as symbols/emojis and bolding to improve skimmability.

I found that LLM A performed better regarding professional tone and vocabulary. It uses verbs like "architected" and "engineered" to describe my projects, which effectively showcased my technical proficiency as a Computer Science student. However, LLM B was good at identifying specific "hooks" that made the document more impressive and better to follow through, such as highlighting my status as a DOST-SEI Scholar and noting that my attendance tracker was successfully adopted by a high school library.

The main differences I observed between the two were in formatting and information hierarchy. LLM A grouped technical stacks within project titles to save space, while LLM B focused on distinct categories for skills. For my final resume, I improved the wording by adopting the sophisticated descriptions from LLM A and merging them with the clean details provided by LLM B. Moreover, unfortunately, the results provided by the two LLMs do not fit in a single page, so I have to adjust my final resume to fit in a single Legal-sized paper.

Through this process, I learned that prompt engineering involves progressive refinement. Even with an identical prompt, different models prioritize different aesthetic and linguistic values; one focused on narrative depth while the other prioritized visual scanning. I realized that to produce a high-quality professional document, it is important to use AI as a collaborative tool to generate ideas, but manual checking and synthesis is necessary to ensure that the final output is accurate and polished.

Section 5 - Final Resume (next page)
